This DNA, isolated from Corynebacterium glutamicum, contains the LysG, plysB and ORR3 genes. LysG and LysB encode a lyseine transport regulatory protein and an export protein, respectively. Microbial production of amino acids (A) is improved by increasing the export-carrier activity amino acids (A) is improved by increasing the export-carrier activity. The method is specifically used to increase production of lysine, used as pharmaceuticals, condiments and intermediates for fine chemicals. This method increases the amount of (A) secreted into the culture medium. Sequence has been found to depend on a single gene. NB. This sequence has been created from the information given in table 2 of the specification

Sequence 2374 BP; 526 A; 640 C; 648 G; 560 T; 0 U; 0 Other;

                  The present invention relates to a method for producing L-arginine in a microorganism (e.g. coryneform bacteria) that has L-arginine producing ability and has been modified for enhanced expression of the 1y8E gene. The microorganism is also modified so that an arginine repressor (argR) does not function normally. The method of the invention is useful for the promoting agents, amino acid infusion and comprehensive amino acid pharmaceuticals. The present sequence represents a DNA fragment containing Corynebacterium giutamicum LysG and LysE genes. Note: The present sequence is given as SEQ ID No:24 in the Sequence Listing but is referred to as SEQ ID No:25 in the rest of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         481 GGITCCAAGIICIACIACIACITCACATCCCGCCACGGGATTAGCIICACGGGITACCTCC

AAF71753 to AAF72330 encode the Corynebacterium glutamicum metabolic pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microcraniams, including organic acids, nonproteinogenic amino acids, purine and pyrimidine bases, nucleosides, nucleotides, lipids, saturated and unsaturated fatty acids, diols, carbohydrates, aromatic compounds, vitamins, cofactors, polyketides and enzymes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids from Corynebacterium glutamicum encoding metabolic pathway proteins, useful for producing fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, and purine and

The present invention relates to the isolation of movel Corynebacterium glutamicum genes encoding metabolic pathway (MP) proteins (AA711853-A471922). The metabolic pathway proteins of the invention include enzymes involved in the lysine and methionine biosynthetic pathways. The polymucleotide sequences of the invention can be used for the large-scale production and/or modulation of expression of fine chemicals such as lysine and methionine. The sequences of the invention may be used to identify C. glutamicum and related organisms e.g. C. diphtheriae in a identify C. glutamicum and related organisms e.g. C. diphtheriae in a subject to detect diphtheria. AAS96073.AAS96132 represent C. glutamicum genes encoding the novel metabolic pathway proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       242 GITTCGGGAAGAAGTCCCCAACCAAGGCCTCGGCGAATTGCCTCACCAAAACTTTCGGCC 301

These sequences from the Coryneform bacterium, measuring expression amount and analysing mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from Coryneform bacterium. Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteriude and organic acids, acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described particularly L-lysine. The present sequence is a nucleic acid described particularly L-lysine of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                145 agariccagocorrogridocanacarogorogorangograroronacados 204

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the isolation of novel Corynebacterium gutamicum genes encoding metabolic pathway (MP) proteins (AAU71863-AAU71922). The metabolic pathway proteins of the invention include enzymes involved in the lysine and methicoine biosynthetic pathways. The polyynucleotide sequences of the invention can be used for the large-scale production and/or medulation of expression of fine chemicals such as production and/or medulation of expression of fine chemicals such as identify C. glutamicum and related organisms e.g. C. diphtheriae in a identify C. glutamicum and related organisms e.g. C. diphtheriae in a subject to detect diphtheria. AAS96073.AAS96132 represent C. glutamicum genes encoding the novel metabolic pathway proteins of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to DNA encoding variants of protein with loop region and six hydrophobic helixes which facilitates excretion of L-1ysine and/or L-arginine to outside of cell of a methanol assimilating bacterium when introduced into the bacterium. The method is used for encoding a protein which facilitates excretion of L-lyaine, L-arginine or both of these L-amino acids to outside of a cell of a methanol assimilating bacterium when DNA of the method is introduced into the bacterium. The present sequence represents a lysE protein from Brevibacterium lactofermentum encoding sequence. (Updated on 27-OCT-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ó,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     419 AGTITCCCATCAACCATGTAGGCATCCCGCAATGAGGGGGGTTGGAATGGCCAAGTGGCGC 478
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a gene from a high temperature-resistant corporation microbe that encodes a heat-resistant lysin biosynthetic enzyme. The enzyme has aspartate-semialdehyde dehydrogenase activity and can be used for growing amino acid-producing microbes. The present sequence encodes an enzyme of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ATGGTTCCAAGTTCTACTACTTCACATCCCGCCACGGGATTAGCTTCACGGGTTACCGCT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               361 GCGGTGGCCACTGACACGCGCAACCGGGTGCGGAGGGTGAGGCGTCGATAAGCAGGG 420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These sequences from identifying the mutation point of a gene derived from a are useful for identifying the mutation point of a gene derived from mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, itamins, asccharides and organic acids, particularly Llysine. The present sequence is a nucleic acid described particularly Llysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              09

The method is used for both of these L-amino acids to outside of a cell of a methanol assimilating bacterium when DNA of the method is introduced into the bacterium. The present sequence represents a lysE24 protein from bacterium and DNA of the method is introduced into the Brevibacterium lactorementum encoding sequence. (Updated on 27-OCT-2003 to standardise OS field) 61 ATCGGACCGCAGAATGTACTGGTGATTAAACAAGGAATTAAGCGCGAAGGACTCATTGCG 120 Novel DNA encoding variant of LysE protein from a coryneform bacterium, when introduced into methanol assimilating bacterium, facilitates excretion of L-lysine and/or L-arginine to outside of a cell. 1016 AIGGIGAICAIGGAAAICIICAIIACAGGICIGCITITIGGGGGCCAGICIIIIACIGICC Length 712; 1472 Sequence 712 BP; 133 A; 173 C; 224 G; 182 T; 0 U; 0 Other; Indels 1426 GCCGTGGTGCTCACCGGATTGGCCGTGAAGCTGATCCTGATGGGTTA Score 696.8; DB 8; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2085
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2145
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1965
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2265
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2146 GGCAGCTGACTGCAACAAGTTCTCACCGTCATCGCCCGGTTCCTCCACCCAACGATTAAT 2205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              568
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    388
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         88
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   28
  mutation point of a gene, measuring expression of a gene, analyzing expression profile or pattern of a gene and identifying homologous gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1726 GITITICGCGGGITITIGGAATCGGTGGCCTTCGCCCAAATGTTGATGCCGGCGTCGTGGGA

The invention relates to an isolated mucleic acid comprission of the 6213 antisense sequencies given in the specification where expression to the 6213 antisense sequencies given in the specification where expression of the nucleic acid inhibits promoter operably linked to the nucleic acid (1) a vector comprising a promoter operably linked to the antisense encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or its fragment whose expression is inhibited by the polypeptide; (4) an antibody capable of specifically binding antisense nucleic acid; (4) an antibody capable of specifically binding cantisense nucleic acid; (4) an antibody capable of specifically binding cantisense nucleic acid; (4) an antibody capable of specifically binding confiseration or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influence the activity of required for proliferation, or that inhibits cellular proliferation; (8) required for proliferation for callular proliferation of an equipment of a proliferation required gene product lies pathway in which the test compound that inhibits proliferation of an or a gene on which the test compound that inhibits are specifically or graduct is overexpressed or underexpressed; (12) determining the extent compound's activity; (11) a culture comprising strains in which the propertion or the ach of the strains is present in a culture or collection of compound; or (13) identifying the target of a compound that inhibits the 1730 TOGOGGGTTTTGGAATCGGTGGCCTTCGCCCAAATGTTGATGCCGGCGTCGTGGAAATC 1789 rėdranacericanaganarakaececedecenanininaritecnederecritedena 1035 proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryctic essential genee. Note: The sequence data for this patent did not form part of the printed specialication, but was obtained in electronic format directly from MIPO at fit, who. int/pub/published_pct_sequences New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. invention relates to an isolated nucleic acid comprising any one of Query Match
